

Lab - 2

Task:

- 1- Create movie & actor application (each model inside it's application)
- 2- Use Static Files Management
- 3- Make a global template Directory for the whole project
- 4- Global Static Directory for all assets needed to run the project
- 5- Use Media File Management
- 6- Use Model Form in Create & Update for objects
- 7- Create templates for all models required
- 8- Using Django ORM CRUD operation for Movie and it's actors
- 9- Relations:
 - Each Movie has many actors
 - Each Actor can act in many movies
 - Each Movie will have only one Director
- 10- Model Fields:
 - Movie (name,production year, creation time,update time) + relation to be created from point 9
 - Actor (name,gender,profile picture)

Bonus:

Use an elegant UI theme
